Camera & Monitor

Fork tyne sighting and rear vision camera's provide the solution where visibility may be compromised. Our range of colour cameras & monitors provide clear & crisp vision to ensure the lift truck operator is aware of the working environment around the machine.

Weight Indicator

Analogue and digital weight indicators provide the solution where the operator needs to know the weight of the load they are handling. These systems provide a simple solution to assist the operator in ensuring road vehicles, storage systems and the forklift itself are operating within their capacity limits.

Mast tilt indicator

HS-Tilt Indicator is a Fork Tilt Level Indicator that is made for all makes and models of forklifts and lift trucks. The incorrect tilt angle of a lift trucks forks is the leading cause of both racking and product damage. The unit shows the operator the level of the forks at all times thereby reducing potential damage by piercing product or racking and increasing productivity by eliminating the guess work.
