## HOW WE CAN HELP YOU

Handling Systems Australia specialises in providing solutions to materials handling problems. We provide a full range of attachments designed for forklift, loader and crane applications. Our attachments come from world-renowned manufacturers as well as our own specialist designed and locally manufactured range. Where applications require specialist one off design and / or manufacture, Handling Systems Australia's engineering department has the capabilities to handle your requirements.

Handling Systems Australia's engineering and workshop facilities have grown from the experienced base of HS Sales. HS Sales was formed in 1987 by a team of engineers with extensive experience within the heavy engineering industry. In the early years the company specialised in applications involving power generation, waste water treatment, high voltage switchboards and fuse gear, plus particular skills with respect to pipe work fabrication, specialised lifting and materials handling. The continued growth and development of the specialised lifting and materials handling operations has enabled HS Sales to establish Handling Systems Australia as its materials handling division.

Handling Systems Australia's engineering operations offer a comprehensive design, manufacture and repair facility for all aspects of the materials handling industry. Our clients have come to rely upon our expertise in delivering solutions for their materials handling problems in a reliable, timely and economic manner.

Handling Systems Australia offers a full range of slip-on and hook-on attachments, allowing forklift and crane operators to achieve the full working potential of their machines. These attachments let the standard forklift truck or crane handle a wide variety of products and applications at a minimal cost.
