

Increase your
productivity with
the Cascade
Turnafork™

A two-in-one attachment for clamp and pallet handling

APPLICATIONS

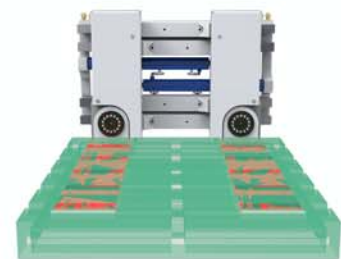

Cascade's Turnafork™ is used in a variety of manufacturing, receiving, warehousing and shipping environments that require both clamp handling and pallet handling. Rotate the arms to the vertical position for clamping, or to the horizontal position to handle most types of conventional pallets. Order picking layers of varied product onto a pallet is simplified. In addition to clamp handling of cartons, the versatile Turnafork™ is also used for clamping awkward or difficult loads such as large tyres.

FEATURES

- Rugged I-beam frame for durability and visibility
- Regenerative hydraulic valve for faster arm speed
- One piece frame bearings for superior durability and serviceability
- Maximum bearing surface for longer bearing life
- Pressure relief valve
- Hydraulically actuated blades

OPTIONS

- Manually actuated blades
- Non-Sideshifting
- Custom blade types and sizes
- Class III mounting
- Quick change lower hooks
- Custom frame width and opening ranges
- Load backrests
- 360° body rotation

AS A FORK - To handle all types and sizes of pallets and oversized loads

AS A CLAMP - To handle all types and sizes of boxed, crated or cubed loads

INDEXED HALF WAY - To handle all types of round or cylindrical objects
