

Unbeaten for strength, visibility and speed of operation.

About this clamp

The Series 4/5 bale clamps offer superior performance whether handling pulp, waste or textile bales.

The combination of the thin profiled arms and field proven gripping surfaces provide safe, sure load handling - knifing between bales and breaking out loads is made easier.

The open centre frame design provides a clear view of the load through and around the arms, so improving productivity and allowing faster truck operation.

Hi strength alloy steel castings are used to joint the bale arms to the 'C' section arm carriers, resulting in a stronger, stress free join for those demanding operations.

'Regenerative' control valve with pressure relief and new cylinder designs allow these clamps to work longer and at higher pressures.

Features

- New unitised frame made of extruded steel sections.
- One piece frame bearings for improved service life.
- Hydraulics cylinders set into the frame for protection.
- Open centre frame for improved driver visibility.
- Bolt on mounting group for easy attachment interchange.
- Regenerative hydraulic valve for faster arm speed.
- 20 % larger load bearing surface for longer bearing life.
- Selection of opening ranges and bale arm sizes to suit all load sizes.
