

APPLICATIONS

The Cascade Grab Attachment has been designed to grab and secure poles or pipes from 170mm to 900mm outside diameter, providing a secure method of transport and loading for this style of product. This slip-on attachment can be fitted very quickly to a forklift, requiring only the connection to the 3rd function hydraulics, via the quick connect hydraulic couplings, and the installation of two locking pins (supplied to prevent the unit from moving off the forks).

The standard finish on this attachment is 'Safety Yellow' enamel.
